1. Stability analysis of a CSI-fed inductor motor with digital vector controller
Tsuji, M.; Yamada, E.; Izumi, K.; Oyama, J.
Power Electronics Specialists Conference, 1988. PESC '88 Record., 19th Annual IEEE
11-14 Apr 1988
Page(s): 885-892 vol.2
Summary: A linear sampled-data model for a current source inverter (CSI)-fed induction-motor vector co system which is controlled digitally by a microprocessor is derived. The system stability is discussed from viewpoints of sampling period, micropro.....
AbstractPlus | Full Text: PDF　**IEEE CNF**

2. A sampled-data control scheme for stabilization of systems with unmodeled high-frequency dyna
Barbot, J.P.; Pantalos, N.
Automatic Control, IEEE Transactions on
Volume: 37　Issue: 2　Feb 1992
Page(s): 285-288
Summary: The output feedback stabilization problem is considered for linear sampled-data control syste the presence of unmodeled high-frequency dynamics. Sufficient conditions for stabilization of such syster given by M. Vidyasagar (1985) for stric.....
AbstractPlus | Full Text: PDF　**IEEE JNL**

3. Simple frequency estimation via exponential samples
Kay, S.
Signal Processing Letters, IEEE
Volume: 1　Issue: 5　May 1994
Page(s): 73-75
Summary: A method for determining the frequency of a real sinusoid is proposed. Based on exponential sampling of the waveform, the approach requires virtually no computation. It can be easily implemented i hardware.....
AbstractPlus | Full Text: PDF　**IEEE JNL**

4. Output feedback control of sampled-data systems with parametric uncertainties
Shi, P.; Xie, L.; de Souza, C.E.
Decision and Control, 1992., Proceedings of the 31st IEEE Conference on
1992
Page(s): 2876-2881 vol.3
Summary: The design of robust control for linear sampled-data systems with parametric uncertainty is considered. Emphasis is placed on linear dynamic output feedback controllers, and two problems are ad(The first is robust stabilization while the seco.....
AbstractPlus | Full Text: PDF　**IEEE CNF**

5. Resolution analysis in signal recovery
Dharanipragada, S.; Arun, K.S.
Acoustics, Speech, and Signal Processing, 1995. ICASSP-95., 1995 International Conference on
Volume: 2　9-12 May 1995
Page(s): 889-892 vol.2
Summary: Resolution analysis for the problem of signal recovery from finitely many linear samples is the of the paper. The classical Rayleigh limit serves only as a lower bound on resolution since it does not ass any recovery strategy and is based .....
AbstractPlus | Full Text: PDF　**IEEE CNF**

6.
Region-of-interest tomography using the wavelet transform and angular harmonics
Yagle, A.E.

Image Processing, 1995. Proceedings., International Conference on
Volume: 2 23-26 Oct 1995
Page(s): 461-463 vol.2
Summary: Some authors have shown that wavelets can be used to localize the Radon transform, i.e., to reconstruct a small region of interest (ROI) from projections densely sampled in the ROI and sparsely sa outside it. A different approach using Fourier e.....

AbstractPlus | Full Text: PDF   **IEEE CNF**

7. **Some issues on disturbance rejection for linear sampled data control systems**
Xie, J.Q.; Farooq, M.
Industrial Electronics Society, 1998. IECON '98. Proceedings of the 24th Annual Conference of the IEEE
Volume: 3 31 Aug-4 Sep 1998
Page(s): 1499-1504 vol.3
Summary: In the design of linear sampled data control systems, tradeoffs between achievable performai disturbance rejection (sensitivity reduction) always manifest themselves. However, when disturbance reje considered to be the first priority, t.....

AbstractPlus | Full Text: PDF   **IEEE CNF**

8. **On the exact recovery of cumulants**
Cheded, L.
Signal Processing Proceedings, 1998. ICSP '98. 1998 Fourth International Conference on
1998
Page(s): 423-426 vol.1
Summary: The importance of higher-order statistics (HOS) is clearly reflected in their increasingly wide applicability. However, because of the high dimensionality involved, the digital estimation of HOS is still p by heavy computational loads which ten.....

AbstractPlus | Full Text: PDF   **IEEE CNF**

9. **Non-linear time scale transformation for the analysis of multiexponential decays**
Palacin, J.; Marco, S.; Samitier, J.
Instrumentation and Measurement Technology Conference, 1999. IMTC/99. Proceedings of the 16th IEE
Volume: 2 1999
Page(s): 1178-1182 vol.2
Summary: Multiexponential decays may contain time-constants differing in several orders of magnitudes such cases linear sampling results in very, long records featuring a high degree of oversampling. Here, w analyze a nonlinear linear time scale transfor.....

AbstractPlus | Full Text: PDF   **IEEE CNF**

10. **Wavelet design of time-varying filters**
Ridsdill-Smith, T.A.
Signal Processing and Its Applications, 1999. ISSPA '99. Proceedings of the Fifth International Symposiu
Volume: 2 1999
Page(s): 599-602 vol.2
Summary: Linear time-varying filters can be efficiently implemented using a construction based on the w transform. The method generates a vector of weights for the wavelet coefficients, known as the scale filte coefficients, using least-squares techniq.....

AbstractPlus | Full Text: PDF   **IEEE CNF**

11. **Parameter estimation of geometrically sampled fractional Brownian traffic**
Vidacs, A.; Virtamo, J.T.
INFOCOM 2000. Nineteenth Annual Joint Conference of the IEEE Computer and Communications Socie
Proceedings. IEEE
Volume: 3 26-30 Mar 2000
Page(s): 1791-1796 vol.3
Summary: The parameter estimation of a traffic model based on the fractional Brownian motion (FBM) is studied. The model has three parameters: the mean rate m, variance parameter a and the Hurst paramet Explicit expressions for the maximum likelihood (ML.....

AbstractPlus | Full Text: PDF   **IEEE CNF**

12. **Fast Hankel transform by fast sine and cosine transforms: the Mellin connection**
Knockaert, L.
Signal Processing, IEEE Transactions on [see also Acoustics, Speech, and Signal Processing, IEEE Transactions on]
Volume: 48 Issue: 6 Jun 2000
Page(s): 1695-1701
Summary: The Hankel transform of a function by means of a direct Mellin approach requires sampling oi exponential grid, which has the disadvantage of coarsely undersampling the tail of the function. A novel n Hankel transform procedure that does not.....

13. Physical Realization of the Impedance Function of Short-Circuited Cascade of Uniform Lossless Transmission Lines (SCULL)
Jury, E.
Circuits and Systems, IEEE Transactions on [legacy, pre - 1988]
Volume: 19 Issue: 1 Jan 1972
Page(s): 100- 103
Summary: In this correspondence the relationship between type-L_{1}stability criterion for uniformly san and distributed parameter systems and the table form of stability of linear sampled-data systems is show simple necessary condition .....

14. On the stability of pulse-width-modulated feedback systems
Skoog, R.
Automatic Control, IEEE Transactions on
Volume: 13 Issue: 5 Oct 1968
Page(s): 532- 538
Summary: The objective of this paper is to present a frequency-domain stability criterion for pulse-width modulated feedback systems. The criterion states that 1) if the Nyquist locus of the pulse transfer functioi linear plant does not intersect or e.....

15. An extended frequency-domain stability criterion for a class of sampled-data systems
Shortle, G., Jr.; Alexandro, F., Jr.
Automatic Control, IEEE Transactions on
Volume: 15 Issue: 2 Apr 1970
Page(s): 232- 234
Summary: A new frequency-domain stability criterion employing a Popov-type multiplier is obtained for ; of nonlinear sampled-data control systems containing a monotonically nondecreasing nonlinearity. This c is an extension of previous results,.....

16. On sampled-data optimization in distributed parameter systems
Lee, K.; Barr, R.
Automatic Control, IEEE Transactions on
Volume: 17 Issue: 6 Dec 1972
Page(s): 806- 809
Summary: A system of parabolic partial differential equations is transformed into ordinary differential eq in a Hilbert space, where the system operator is the infinitesimal generator of a semigroup of operators. / sampled-data problem is then formula.....

17. Statistical evaluation of digital-analog systems for finite operating time
Northrop, R.; Johnson, G.
Automatic Control, IRE Transactions on
Volume: 5 Issue: 2 Jun 1960
Page(s): 118- 128
Summary: A frequency-domain mathematical model for comparing the performance of a linear sampled channel to a linear continuous channel is developed. The model assumes a suddenly applied stationary r input (input identically zero before the local t.....

18. An extreme value problem in a linear sampled-data feedback system
Knowles, J.
Automatic Control, IEEE Transactions on
Volume: 8 Issue: 3 Jul 1963
Page(s): 235- 239
Summary: When an uncorrelated, wide-band Markov noise process contaminates the input signal to a li sampled-data feedback system, the extreme values of the mean-square true error and the mean-square apparent error are shown to occur for most practical pu.....

19. Synthesis of linear antenna arrays using Z transforms
Gaushell, D.
Antennas and Propagation, IEEE Transactions on [legacy, pre - 1988]
Volume: 19 Issue: 1 Jan 1971

Page(s): 75- 80

Summary: It is well known that a linear antenna array with equally spaced elements can be represented polynomial whose roots correspond to the nulls of its antenna pattern. Since the linear array has equally : elements, its polynomial has only inte.....
